## FORMOSIS™ Helsinki

investigating timeless design

Formosis means beautiful in Latin. Beauty, functionality and quality are the elements that make a good design. But for timeless design, you need something special – a secret ingredient. We are in search of this mystical component.

Formosis was born in a quest to understand how timeless design is achieved. Basic principles of architecture like beauty, function and structural integrity (quality) are the elements which provide a platform for each concept and design. But a more intangible component, which is the key to perpetually good design is something we are constantly investigating – the secret ingredient for making a space feel cosy, magical and a source of inspiration.

**fōrmōsīs (lat.)**

*finely formed, beautiful, handsome*

**formosis**  
HELSINKI

FORMOSIS™ introduces a new series of design lighting fixtures. The collection includes interior lamps for private homes, public spaces, hotels and restaurants. Combination of timeless design, innovative shapes and folding techniques give the lamps their unique character. Combining 3D modelling and printing with laser cutting technologies produces exact pieces that fit together and help give the lamps their top quality look and feel.

**form + metamorfosis = formosis**

*"Formosis is about understanding the dialogue between form and the chosen material. It's about producing interesting perceptions of shape, texture and light. Our goal is to produce high quality lighting fixtures, which also work as standalone sculptural objects. We hope to offer a new alternative and unique perspective to contemporary Scandinavian design."*

Designer of the collection, architect Aki Hiltunen

The slim and agile STEP table lamp fits easily in many places. Illusion of movement is captured in the lamp's form. The light seems to take a step forward. There are many faces to the lamp depending on which side you look at it.

FORMOSIS™ Helsinki products are designed and made in Finland. All items are finished and inspected with attention to detail and with high quality criteria.

FORMOSIS™ BUD table lamp  
Product ID 100100

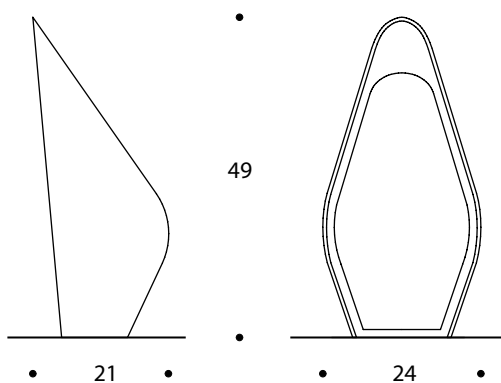

The softly curved and sympathetic BUD lamps get their form inspiration from tulip buds. Floor and table lamps form a handsome pair together. Timeless design and the lamp's soft and even light make it an easy addition to any interior.

The lamp is designed and made in Finland from laser-cut acrylic. Sheets of acrylic are first cut into shape with a laser cutter, then carefully formed by hand into their final form. The lamps are finished and inspected with attention to detail and with high quality criteria. The lamp is made of two acrylic parts that interlock together with an innovative mechanism making dusting and changing of light source easy. This simplified lamp has no visible metal parts.

BUD table lamp  
Design Aki Hiltunen

E14 max 40W  
White laser-cut acrylic  
49cm x 24cm x 21cm (h x w x d)

Recommendet light source:  
Energy saver bulb  
500 lumen 4000K (white light)
